

KOUSHIK NAGARDONA

Data Science & Analysis | Machine Learning | Python
koushik.ngd@gmail.com | +971 50 583 6164 | Dubai, UAE | [GitHub](#) | [LinkedIn](#)

PROFILE

Computer Science student specializing in Big Data and AI with hands-on experience building end-to-end data pipelines, machine learning models, and analytical dashboards. Skilled in Python, Pandas, SQL and Matplotlib with a focus on deriving actionable insights from large datasets. Strong interest in applying data science to solve real-world problems in the UAE market.

TECHNICAL SKILLS

Data & Analysis: Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, Power BI

Machine Learning: scikit-learn, TensorFlow

Languages: Python, SQL, C++

Tools: Git, GitHub, MySQL, Jupyter, VS Code

DATA SCIENCE & ANALYSIS PROJECTS

Dubai Real Estate ROI Analysis | [GitHub](#) | *Personal Project* 05/2026

- Analyzed 1M+ property transactions from the Dubai Land Department to identify the highest ROI neighbourhoods in Dubai.
- Built a complete data pipeline in Python covering data loading, cleaning, filtering, groupby aggregations and ROI calculations using Pandas.
- Applied statistical filtering with minimum transaction thresholds to ensure reliable area-level averages across 100+ neighbourhoods.
- Visualized findings in a Matplotlib dashboard with color-coded ROI tiers; published on GitHub and Kaggle.

Explainable AI Loan Approval Agent | [GitHub](#) | *Personal Project* 01/2026

- Built an end-to-end ML pipeline using Random Forest and Logistic Regression on structured financial data for loan approval prediction.
- Performed full EDA including missing value treatment, feature distribution analysis and correlation analysis across 20+ features.
- Integrated SHAP for global and local model interpretability; evaluated model using accuracy, precision, recall and F1 score metrics.

Dubai Rental Market Trends and Price Prediction | [GitHub](#) | *Personal Project* 05/2026

- Analyzed 16 years of rental transaction data from the Dubai Land Department to uncover market trends and price drivers across 103 areas.
- Built time series visualizations showing rental price trends from 2007 to 2023, identifying key economic events including the 2008 crash and COVID-era surge.
- Trained a Random Forest model to predict rental prices using area, property type, size and room count; achieved R2 of 0.699 with MAE of AED 318,476.
- Used feature importance analysis to identify property size as the strongest predictor of rental price, outweighing location and room count.

EDUCATION

BSc Computer Science - Big Data & Artificial Intelligence | *University of Wollongong in Dubai* 04/2025 – Present

Relevant Coursework: Data Structures & Algorithms, Statistics & Data Analysis, Discrete Mathematics, Machine Learning, Database Systems

CERTIFICATIONS

Deloitte Australia - Data Analytics Job Simulation | Forage

AWS - Generative AI with Diffusion Models | Amazon Web Services

Python for Everybody Specialization | University of Michigan / Coursera

Introduction to Artificial Intelligence | IBM

LANGUAGES

English (IELTS 7.5, Professional) | **Hindi** (Native) | **Spanish** (Conversational) | **Mandarin** (Basic)
